Ottawa, April 23, 1915.

Rev. Sir,-

By official letter of October 10, 1914, you were informed that the Department considered that the number of cows being milked at St. Joseph's Industrial School was inadequate to furnish the milk required for the number of children in attendance. You were also informed that the milking herd should be increased to ten.

I will be pleased to hear what action you have taken with regard to carrying out the Department's wishes.

Your obedient servant

J. D. McLEAN

Sir,-

The Rev. Principal of the St. Joseph's School, also known as Dunbow and High River, requested me to ask the Department to supply about 4 dozen bed spreads for use on beds in the girls home of this institution.

I informed the Rev. Principal that to my knowledge the Department did not supply such articles to schools and that these institutions were expected to provide such from the earnings.

The Crowfoot School was then cited as a point where a good deal of furnishings were provided by the Department.

Your obedient servant,

REPORT OF INSPECTOR J.A. MARKLE ON THE ST. JOSEPH'S INDUSTRIAL.

5. The classification of the boys shows 25 in standards 3, 4, and 5. My impression is that it is the desire of the Department that these 25 lads take up farming in due time to gain a livelihood. If my impression is the correct one I know of no good reason why the Readers now in use should not be discarded and the book on Agriculture by C.C. James M.A. and Alex. McIntyre B.A. authorized for use in Manitoba and the two other western provinces substituted therefor. For the few years these boys are likely to be under tuition, the tuition, I think cannot be too direct towards the goal to which it is desired to lead them. About 2 dozen such books would be required for this division in this institution.

A similar book, only on Domestic Science, might, too, be used with profit in lieu of the Readers in use, in the girls' class room, - say 1 dozen books.

Report dated, - December 14th, 1915.

School Gardens in Urban Schools of Alberta

TABER SCHOOL GARDENS, 1915

The school garden at Taber was the best in the province. No fewer than five of the teachers on the staff have attended the summer school for teachers one or more summers. The principal, Mr. Lynd, was one of the 35 high school teachers to take advantage of the courses offered last summer.

In their efforts to develop instruction and practical work, the school board were helped greatly by the active interest and support of the Women's Institute and the Agricultural society. The two acres of ground adjacent to the school used for the garden were placed at the service of the school board by the Hon. A. J. McLean for school garden purposes.

Early in the spring this land was cleared, ploughed and thoroughly cultivated, no less than twenty loads of manure being worked into the soil. A small water tank was installed at the end of the garden in an elevated position, so that garden hose could be used in watering the garden.

The school board provided funds for

garden equipment, initial clearing and cultivating and the water tank. The Agricultural society and the Women's Institute provided seed and money for prizes. Superintendent Fairfield, of the Dominion experimental farm at Lethbridge, assisted by supplying special seed potatoes for about twenty boys who undertook to demonstrate this production.

The prizes offered by the Agricultural society for each room in the school were as follows:

1—Best twelve potatoes from pupil's garden. First prize, \$3.00; second prize, \$2.00; third prize, \$1.00.

2—Best collection of vegetables from pupil's garden. First prize, \$3.00; second prize, \$2.00; third prize, \$1.00.

The prizes offered by the Women's Institute were for the best garden plot during the period of cultivation and growth. Arrangements were made to have the plots judged three times during the season, on or about the following dates: May 31, June 28, August 1 (middle of vacation).

In judging, the following system of rating was used: Arrangements, 15 points; cultivation, 25 points; freedom from weeds, 20 points; vigor, maturity and general effect, 40 points.

The following was the prize list:

1—Grade 1 (1 plot to 2 pupils, prizes to be divided). 1st, \$1.00; 2nd, 80c; 3rd, 50c; 4th, 30c.

2—Grade 2 (1 plot to 2 pupils, prizes to be divided). 1st, \$1.00; 2nd, 80c; 3rd, 50c; 4th, 30c.

3—Grade 3 (1 plot to 2 pupils, prizes to be divided). 1st, \$1.00; 2nd, 80c; 3rd, 50c; 4th, 30c.

4—Grade 4 (1 plot for each pupil). 1st, \$1.50; 2nd, \$1.00; 3rd, 75c; 4th, 50c.

5—Grade 5 (1 plot for each pupil). 1st, \$2.00; 2nd, \$1.50; 3rd, \$1.00; 4th, 75c.

6—Grade 6 (1 plot for each pupil). 1st, \$2.50; 2nd, \$2.00; 3rd, \$1.50; 4th, \$1.00.

7—Grades 7 and 8 (1 plot for each pupil). 1st, \$3.50; 2nd, \$2.50; 3rd, \$2.00; 4th, \$1.00.

8—Grades 9, 10 and 11 (1 plot for each pupil). 1st, \$5.00; 2nd, \$3.50; 3rd, \$2.00; 4th, \$2.00.

With such definite and tangible sup-

port from the community the success of the undertaking was assured.

Mr. Lynd, in writing of what may be spoken of as the school side of the work, says:

"We arranged the plots—over 250 in all—as recommended by Dean Howes at the summer school. The rows were three feet apart, and the plots within the row two feet apart. The size of the plots were four feet by 10 feet. The rows were lettered and the plots numbered—G.S. would be plot 8 in row G. If the number indicated the township the letter indicated the range. Each pupil of the upper grades had a plot. Some of the high school pupils had two plots each, one for vegetables and one for flowers. In addition to these individual plots, larger spaces, 12 feet by 12 feet, were allotted for vines.

"In the high school plots we experimented with three fertilizers to test the need of the soil for nitrogen, potash and phosphorus. In the same plots we also tested thick and thin sowing, e.g. the east and west halves of a plot were treated with different fertilizers, while the north side was sown more thickly than the south side. The only observable difference made by the fertilizer was in the case of the peas, where the soil without artificial fertilizer grew larger vines than did the soil treated with potash. The south side of the plot was sown at the rate of a pea to every inch. The latter grew just as large as the former, and appeared to protect each other more. The grains dealt with in this manner were flax, corn, small oats, large wheat, small grained wheat, alfalfa and millet.

"The pleasure and profitable experience of the community, children and teachers in the work this year will lead to even better results next year. As there is land to spare, it is planned to make arrangements with the Dominion experimental farm to have a small demonstration unit and to do considerable in planting trees and shrubbery. If the plans of those interested are fully realized the school garden grounds will become the beauty spot and aspiration to the children and community."

NEW YORK MARKET IS DEPRESSED; CAN'T BE AROUSED

New York, Jan. 13.—Efforts to lift the market out of its recent slough of depression by a concerted drive against the increasing short interest in special stocks proved abortive in today's dull and professional market. A few of the order shares made sharp recoveries from low prices of yesterday. Particularly Crucible Steel, which was helped by the company's favorable statement of earnings for December. Another encouraging development in that quarter was the report that the administration in Washington had resigned its opposition to any legisla-

117657

Alberta Inspectorate,

Red Deer, January 18, 1918.

Sir,-

486389

Answering your letter of the 13th. instant I wish to say that "Practical Housekeeping", A.G. Payne, may meet the requirements for the girls in the St. Joseph's school. The U.S. Department of Indian Affairs have, I understand, published a booklet entitled "Some things girls should know". It may be prudent to secure copies of both of these publications with a view of deciding whether one or both might be profitably used.

As far as I know the only authorized book, for use in the public schools of this province is "How to be Healthy", by J. Halpenny, B.A., and Miss Lillian Ireland. This publication is under the head of Hygiene and a portion of it, at least, treats along domestic science lines. In my opinion the last named book would supply the girls in Indians schools with information of far more practical benefit to them than do the Readers now in use. "Practical Housekeeping", first referred to herein, however, appears to be worthy of first consideration.

In event that I learn of ~~xx~~ a book more adapted for use in Indian schools than any herein referred to I shall advise you.

Your obedient servant,

The Secretary,

Department of Indian Affairs,

Ottawa.

Sir,-

I beg to say that in a letter dated the 27th September, Dr. Grain, who made report to the Department in connection with his visit to the St. Joseph's Industrial School, remarks that you would be glad to have authority to purchase drugs for the school at High River. I beg to say that when it is necessary to procure a supply of drugs for use on behalf of the pupils of the institution, the Department will allow you to make purchase at High River. Before the drugs are procured, a requisition for the same should be submitted to the Department through Dr. Grain, Chief Medical Officer, whose address is Winnipeg.

On the 22nd December, 1915, the Department approved of the purchase of certain drugs for which you had made requisition. If the requisition in question was returned to you and if you procured the articles enumerated thereon, you should send an account in detail and in duplicate for the same to the Department. I may say that at any time when you receive authority to make purchases you should without delay send in the account for the articles which you procured.

LETTER FROM INSPECTOR J.A MARKLE, DATED NOVEMBER 13, 1914. 95486

Regarding the so called industrial schools, I entertain the view that of late they seem to be striving to make sufficient to meet expenses to too great a degree. When they are compelled to do this too little class and demonstration work is carried on. Last week I visited the St. Joseph's school, (Dunbow) and there has been no class work by the boys since June last at this institution.. Gardening, haying, harvesting, and threshing has been the occupation of the staff and the male pupils for over four months. Class work likely was resumed by the boys, to-day. The girls have received regular tuition, however. I shall likely make a report of this inspection to-morrow and have simply referred to this to illustrate my statement, "that industrial schools seemed to be striving too much to meet the expenses of operation".

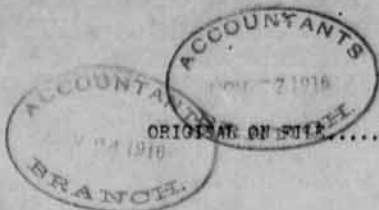

The vacation, too, should be at a time when it best met the local condition.

EXTRACT FROM THE REPORT OF INSPECTOR MARKLE ON THE
ST. JOSEPH'S INDUSTRIAL SCHOOL.

495323

22.... Department's letter, 117657-23 of October 3rd authorizes the purchase of needed drugs at High River. This is not a convenient point for the school to get supplies and no other supplies are secured, there, either. Okotoks is the most convenient place to do business at and Calgary the 2nd most convenient. It is thought that the Chief Medical Officer, Dr. Grain, suggested High River and possibly for the reason that the school is sometimes called the High River school because of the fact that it is located on the river of that name.

Report dated, November 14th, 1916.

Dear Sir,

I have just come back from a visit to our Dunbow Industrial School, and I take the liberty of placing before you some remarks bearing on the state of this school. The number of children is not what it should be, and I believe the Department, or at least some of its agents are to blame for this scarcity of children. As an example, I may state that the catholic members of the sarcee band would like to place some of their children in the Dunbow school, and according to the principal the only opposition to this move, comes from the department. From the Agent of the Blood reserve no help of any kind, not only for recruiting, but even for sending back to the school deserters, who are allowed to stay on the reserve, without any efforts being made to have them returned to Dunbow. Many other complaints were made by the Rev. Principal of the inertia or may be ill-will of this agent. On every one of the southern reserves, there are lots of children whose place should be in the Industrial school, if the agents would second and encourage the efforts of the principal. As far as I could see the staff of the school is good and efficient and I cannot see why this school should not be encouraged by all the indian agents of the south, and I take the liberty of asking you to kindly make some efforts to have the school filled up by children who ought to be there. Above all I would recommend that the Sarcees should be told officially that they are welcome to send their children to the Dunbow school, and that all assistance should be given them for this purpose. I know that some indians on the Blood reserve and probably on the others too, hope that the Department will build industrial schools on their reservations, out of the proceeds of the sale of part of their lands. I do not know your intentions on the matter, but I believe that one advantage of the Dunbow school is its distance from any reserve, as I know by personal experience the many troubles coming out of the fact that the children of schools are

near their families.

I do not need to write any more on the matter of the Dunbow school, I feel certain that you will do justice to it and see that the agents of the Department do not, at least, oppose it and prevent children from being sent there, or being withdrawn from it before the proper time.

I remain, dear Sir,

Yours respectfully

H. Grandin

*to Mr. Grandin for
receiving action*

July 10th, 1917.

Dear Father Grandin -

I have your letter of June 13th, in reference to the St. Joseph's Industrial School. I am aware that the attendance at this institution has greatly diminished during the past few years. This is largely due, I think, to the attitude of the Indians, who, specially on the Blood and Peigan Reserves, have of late been opposed to the system of transferring the children of a certain age from the boarding to the industrial school.

With a view to trying to effect some improvement I propose to write to the agents of the reserves interested to ask them to make a special effort to recruit some pupils for the industrial school. I know there has been no opposition from the Department to the enrolment of Roman Catholic children from Sarcee at the St. Joseph's Industrial School, and any hindrance on the part of the Agent has not been brought to my

attention. I shall write to this officer also.

With regard to desertions, I would suggest that the Principal bring any cases of that kind to the attention of the Department so that the necessary action can be taken.

Yours very truly,

Deputy Superintendent General.

Ottawa, July 24, 1917.

Sir,-

It has been brought to the attention of the Department that little, if any, assistance has been given in your agency to the recruiting of pupils for the St. Joseph's Industrial School and, as a consequence, the school is hampered for want of pupils.

I have, therefore, to request that you will use your endeavours to have any Roman Catholic children of school age on the reserve, who are not now pupils of a residential school, sent to St. Joseph's, as the Department is advised that many of the Catholic members of the band are anxious to have their children placed there. You should inform these Indians that it is to their advantage to have their children placed in an industrial school, as there is no prospect of an institution of this kind being established on their reserve.

Your obedient servant,

Asst. Deputy and Secretary.

Wm. Gordon, Esq.,
Acting Indian Agent,
Sarcee Agency,
Calgary, Alta.
